## SUMMARY

I am a software engineer with over six years of development experience. I am a lifelong learner and enjoy collaborating with others. I use my strong communication skills to help teams collaborate, share knowledge, and succeed. I enjoy teaching and mentoring new team members, and I view challenging tasks as great opportunities for growth. When I'm not coding, I enjoy reading and traveling.

## PROFESSIONAL EXPERIENCE

### Lander

**Software Engineer** (IoT Application - .NET / RabbitMQ / MySQL / Redis)

Jul 2025 – Aug 2026

1 yr 2 mos

#### Accomplishments:

- Working on an IoT application designed to enhance the safety of user vehicles and residences. Key features that I developed included real-time geo-location tracking, customizable geofencing for unauthorized entry/exit alerts and critical anti-theft capabilities, such as remote vehicle immobilization (fuel pump shut-off).
- I also developed codes at front-end, enhancing the UI/UX. Using the Leaflet library, I streamlined the user experience, enabling one-click creation and easy modification of geofence shapes.

### Sindibad, Alibaba Travels Co.

**Software Engineer** (Hotel Service - .NET / SQL Server / Redis)

Jan 2025 – Jun 2025

6 mos

#### Accomplishments:

- Developed the Adotel Provider integration for the Sindibad Hotel Application, enabling users to purchase rooms from multiple hotel providers with the best available pricing.
- Revamp Sindibad Hotel Application infrastructure, expanding it to support multiple providers, where initially only Alibaba was available. We developed and integrated additional providers like Adotel and SAMA, enhancing the application's scalability and flexibility to allow for seamless addition of new providers in the future.
- Develop and maintain a notification service using Messagebird and Resala, which sends SMS and WhatsApp notifications to users during the order process.

### Okala

**Software Engineer** (Ecommerce - .NET / SQL Server / Redis / Kafka)

Mar 2023 – Feb 2024

1 yr

#### Accomplishments:

- Collaborated with the team to develop and maintain the Fulfillment and Delivery microservices using .NET, SQL Server, Kafka and Redis, each managing specific phases of the order lifecycle.

- Develop and maintain an Accounting Service using IdentityServer 4, managing authentication and authorization for both customers and employees accessing internal services such as ticketing and administration panels.
- Additionally, we integrated legacy address and profile services into the Accounting Service, consolidating all user information management into a single system, improving efficiency and consistency.
- Participated in migrating customer data from a legacy database to the new Accounting Service database, which initially only housed management and administration panel users. Collaborated on designing and implementing query to clean and filter unnecessary information from the legacy database before transferring relevant customer data. This migration consolidated all user information —both customers and internal users—into a centralized database, enhancing data accessibility and management efficiency.

**Research Center for Development of Advanced Technologies**  
**Software Engineer (IoT Application - .NET | RabbitMQ | SqlServer)**

**Mar 2019 – Feb 2023**  
**4 yrs**

**Accomplishments:**

- **Chat System:** Developed a chat system similar to modern messaging applications using .NET, Redis, and RabbitMQ.
- **Design and Development:** Led the development of the Inventory Section, where I engineered data crawling solutions for multiple websites using .NET and Selenium. For Google Scholar data, utilized RabbitMQ to queue detailed page requests and created a consumer service to process and manage crawled data efficiently.
- **Dashboard Creation:** Built interactive dashboards using the Elastic Stack to present and visualize collected data insights, enhancing data accessibility and reporting capabilities.
- **Security and Accounting:** Contributed to the project's security and accounting features, implementing robust authentication and authorization mechanisms through Identity Server.
- **Project Involvement:** Participated in a project focused on comprehensive log analysis by gathering and analyzing logs from various sources, including Windows logs, SQL Server logs, and user activity logs across systems. Used Logstash for efficient log aggregation, with data stored in Elasticsearch for advanced querying and insights.
- **System Development:** Developed a web application to employees work management, built using CakePHP and Python. This tool enhanced work tracking and management processes across the organization.
- **Cost-Effective BI Solution:** Created a custom Business Intelligence tool as an alternative to Power BI. Developed using .NET for the backend, Angular for the frontend, and MongoDB for data storage, which we subsequently offered to other organizations as a viable alternative to expensive BI solutions.

---

## SKILLS

- **Languages & Frameworks:** C# and .NET
- **Architecture & Backend:** Microservices, Clean Architecture, N-Layer Architecture
- **Databases:** SQL Server, PostgreSQL, MySQL, Redis, MongoDB
- **Messaging & Distributed Systems:** RabbitMQ and Kafka
- **Observability & Search:** Grafana and Elastic Stack
- **DevOps & Tools:** Also Familiar with Git, Docker, K8S and GitHub Actions
